How to Setup

How to setup Private Voice

Initial Setup

Permissions

Make sure you don't change the default permissions when you invite PrivateVoice.

To setup the bot, or change any of its configs, you need the following permission:

-> Manage Channels

Prefix:

Mention the bot to change the prefix

Setup:

To setup PrivateVoice, you first have to define the voice channel users will have to join, and the category under which you would like the new channels to be created.

Command	Description	Example
=setup channel *{channel}*	Lobby / master channel	=setup channel *Join To Create*
=setup category *{category}*	Category to hold the channels	=setup category *Voice Channels*

After this, everything will be fully operational. Continue the manual for more features!

Get PrivateVoice-Plus to setup multiple categories and Lobby channels.

View settings:

Command	Description	Example
=setup show	Print the entire setup	=setup show

View all commands:

Command	Description
=help	Show all general commands
=help staff	Show setup commands (only available to members with 'Manage Channels')

Settings

General settings to configure the main functions of the bot.

Command	Description	Example
=set moderator {@role / @user}	Channels will always be open to this rank or user. Execute the command again to remove the role/user.	=set moderator @Kobe118
=set limit {0-99}	Maximum users in a voice channel. `0 to disable`	=set limit 10
=set naming {1-5}	Custom channel naming	=set naming 2

> More settings and naming Presets available in PrivateVoice-Plus

Naming Presets

Index	Preset	Example
1	Private {Username}	Private Kobe118
2	{index}# Private (Index counts the PV channels)	5# Private

Toggles

Toggle different possibilities for PrivateVoice channels

Command	Description	Default value
=toggle name	Enable / disable users to change their channel name	Enabled
=toggle open	Open / close channels by default to everyone	Open
=toggle streaming	Enable / disable streaming in PrivateVoice channels	Enabled
=toggle pushtotalk	Force the use of push to talk in all PrivateVoice channels	Disabled
=toggle hide	Allow / prevent users from hiding their channel	Enabled
